a
Phase-resolved error follows 2|sin(πδN)|
relative RMS error at instant
ode-mlp
ode-deep
ar-residual
linear-sgd
exact DMD
2|sin(πδN)|
√2 = decorrelated
rollout length N (shedding periods)
b
Phase-invariant statistics stay flat when the model has an attractor
covariance error
ode-mlp
ode-deep
ar-residual
linear-sgd
exact DMD
rollout length N (shedding periods)
